First author: Nagy Lajos

Year: 1970

Abstract

The paper deals with the amount of short-wave global radiation arriving on levels of different height and on the upper limit of the foliage. Observations were carried out in oak and acacia woods in all four seasons in 1967-1968 and were continued in all phenophases of the vegetation period.

biodiversity: higher plants

habitat: steppe woodlands

stand structure

climate: microclimate, climate of stand

meteorology, weather, hydrology
