Abstract

Vegetation map (1:10,000) of the Vajszló Forest together with a description of the occurring communities (Scillo vindobonensi -Ulmetum Kevey 1996, Fraxino pannonicae - Carpinetum Soó et Borhidi in Soó 1962, Paridi quadrifoliae-Alnetum Kevey 1996) and their types are presented. Communities and types were compared by ecological indicator values.

forest structure: herb layer

map: vegetation map

phytosociology

biodiversity: higher plants

habitat: swamp and riverine forests

Journal: Acta Botanica Hungarica

Location: ER Archívum - digitális
